Activating a Verizon Gateway:

Under “Configuration”, go to “Mobile”

Select Verizon as “Service Provider”, and make sure Mobile IP Preferred is selected.

Click on “Provision Device”

This window will pop-up.

Select “Verizon Wireless”

Click “Next”
Make sure you have an antenna on the “Primary Cellular” connector.

Select “Automatically provision the mobile device”

Click “Next”

The connection will try to activate. This takes a few minutes.
Once the activation is complete, you can click on “Finish”.

If the device hasn’t been activated yet, you’ll see this window.

You may click on “Next” to try to activate it again.

You may have to try multiple times before it activates.

If this problem persists, contact your service provider.
